```

Practical No : 02

Title : Write a program to find largest of three numbers.

Name : Taur Swanand Dattatray

Roll No : MC26F14F064

```
*/
```

```
#include<stdio.h>
```

```
#include<conio.h>
```

```
int main()
```

```
{
```

```
    int n1,n2,n3;
```

```
    clrscr();
```

```
    printf("Enter three numbers:");
```

```
    scanf("%d%d%d",&n1,&n2,&n3);
```

```
    if(n1>n2)
```

```
    {
```

```
        if(n1>n3)
```

```
        {
```

```
            printf("The largest number is %d",n1);
```

```
        }
```

```
        else
```

```
        {
```

```
            printf("The largest number is %d",n3);
```

```
        }
```

```
    }
```

```
    else
```

```
    {
```

```
        if(n2>n3)
```

```
        {
```

```
            printf("The largest number is %d",n2);
```

```
        }
```

```
        else
```

```
        {
```

```
            printf("The largest number is %d",n3);
```

```
        }
```

```
    }
```

```
    getch();
```

```
    return 0;
```

```
}
```

Output:

Enter three numbers: 674 345 234

The largest number is 674
